# DELPHINIUMS

AND OTHER NOTEWORTHY  
HERBACEOUS AND ALPINE PLANTS

*Three Point Gardens*  
Nurserymen to a Discriminating Clientele  
EAST STROUDSBURG, PA.

WE OFFER a carefully selected group of delphiniums in separate named varieties for the first time available at popular prices. These plants are field grown clumps, sturdy and vigorously wintered. They have been checked as to type and description while in bloom, by a rigorous system of points and represent a close accuracy in color and form to the prize winners in England from which they are directly descended.

Undescribably magnificent they are with florets ranging from two or three inches across, well set on towering spikes of 5 and 6 feet, and more than half of this solid bloom. Not once only do they bloom during the season, but, as if unwilling to forget their moment of perfection, they lift their lovely heads again, and often yet again, before winter clothes and covers them.

For best results delphiniums need a well drained soil. Lime stirred about the base of the plant twice a year and worked in well, together with bonemeal and a little well-rotted cow manure, produces the healthiest growth.

All plants are shipped balled and burlapped and arrive in perfect condition.

## DELPHINIUMS

In Separate Named Types Selected From the Finest English Sources

ADVANCEMENT—This marks an achievement in delphinium creation. each	
There is often 5-6 ft. of solid bloom. Colors of striking beauty.....	\$5.00

## A LIST OF THE MOST DESIRABLE ALPINE AND HERBACEOUS PLANTS

**G**REAT LOVE and enthusiasm for alpine plants and delphiniums have made us specialize in these subjects. Our knowledge is thorough and comprehensive with years of experimentation and study. Here, in the Pocono Mountains, at an elevation of 1500 feet, we grow the plants where they mature under ideal conditions. In our shaly limestone hill sides they grow as sturdy and ravishingly beautiful as in their native haunts. Gathered from all the world, we have selected a comprehensive list for all needs and conditions, as the most worthy subjects to beautify your gardens. Our natural scree provides free root runs. These wildlings are all field grown with amazing results. And a wealth of joy is stored in the wee little gems when they are established in your own garden.

	each dozen
*AETHIONEMA <i>iberidium</i> —Gray glaucous leaves. White flowers are produced in terminal clusters. April-May. Trailer.....	.60 5.00

### How to Reach Our Nursery

Our Nursery grounds are located on Franklin Hill, just two miles from the East Stroudsburg Post Office. At the Baptist Church turn right on East Broad Street and continue four blocks. At this point our Nursery sign will direct you left on a good country road to our gardens and an open view of the Delaware Water Gap.

WE ARE prepared to execute designs and complete plantings for the small house or the extensive estate. Our intimate knowledge of plant material and our appreciation of natural formations, makes us especially fitted for building rock gardens, blazing woods trails, for naturalizing in sun or shade, and the building of the old fashioned garden. Consultations may be arranged for.
